```

## What's New in the Photoshop?

With the development of science and technology, the middle- and large-scale growth of power transmission lines is becoming a serious issue. A utility company may have to utilize the existing circuit to build a new transmission line or power grid, or carry out transmission and laying of a single circuit by improving the existing circuit. Owing to the "safety standards" stipulated by relevant authority, a crane with a rated capacity of 2700 Kg may be utilized in the construction of power transmission lines. The crane may have a gantry with a rated capacity of 2700 Kg, including a hook a casting crane (or jib type crane) connected thereto at the top thereof, may lift a high-voltage transmission line or power transmission tower, and may be used to raise and lower the high-voltage transmission line or power transmission tower, thereby laying the transmission line or the power transmission tower. As shown in FIG. 1 and FIG. 2, the crane 9 in the prior art is composed of a gantry 91 with a rated capacity of 2700 Kg, including a hook 92, an upper pole 93, a lower pole 94, and a traveling device 95; a wrapping cable 96 is wound around the top of the power transmission line or power transmission tower, and the wrapping cable 96 is wrapped around the hook 92, the upper pole 93, and the lower pole 94, so that the power transmission line or the power transmission tower is carried by the gantry 91; and a winch 8 is used to lift and lower the power transmission line or power transmission tower. The wrapping cable 96 is a conductive cable and is wound around the power transmission line or the power transmission tower by the wrapping cable 96, such that a large-scale electric circuit may be connected. However, in the crane of the prior art, when the power transmission line or the power transmission tower is lifted, the wrapping cable 96 is directly wound around the gantry 91 and the power transmission line or the power transmission tower, and the gantry 91 is lifted, such that the power transmission line or the power transmission tower is lifted by the wrapping cable 96. For example, as shown in FIG. 2, when the power transmission tower is lifted, the power transmission tower is lifted in a state that the power transmission tower is directly hung on the wrapping cable 96 and the gantry 91; therefore, when the power transmission tower is lifted, the wrapping cable 96 is pulled by the power transmission tower, and the conductive cable portion of the wrapping
