What to do and which end to get the answer what I was reading In it, look for these lines: The second line should open the macro file: Then you can go and change the variable you like by substituting the variable names. For the other, look for this line: `Set $dPath = fso.GetFileName(WScript.Arguments.Item(0))` Change it to: `Set $dPath = fso.GetFileName(WScript.Arguments.Item(0))` I hope this will help. Q: UnicodeEncodeError on PHP app when running on Heroku As a follow-up to this question, I have an app that was recently deployed to Heroku. I'm trying to set up Cloudflare. I have the directives for the Cloudflare CDN in the Heroku docs: I've also defined a custom page to call out to the Cloudflare API: The Cloudflare API call is as follows: `$json = json_decode(file_get_contents("urlencode($x->dns_domain). "&client_id=0123456789&style=full&limit=1")); $records = $json->records->value; echo`

---

"Records: ". \$records; The response from Heroku is here:
