Aksi is free and open-source software, released under the GNU General Public License and distributed as a single XPI (application-like package) file. Aksi Source Code The source code repository for the Debian package is available on Gitlab. The repository contains the sources of the package, as well as the Python scripts used by the package. You can report bugs in the Debian package here:Q: Applying string.Format to a list of objects I have a list of instances of the class "box", which is a simple class that holds the different aspects of a box. (Volume, Sides, and so on) It looks like this: public class box { public int id { get; set; } public string name { get; set; } public string use { get; set; } public Volume volume { get; set; } public Sides sides { get; set; } public DateTime created { get; set; } } I am trying to make a box.cs object which then works as a factory for boxes, and performs all of the calculations needed for each box. First I will need to load all the boxes from a database, do a few checks, and if it does not exist, make a new one. Each box has a unique ID, as well as a string name to give it a unique id for the user. The name is generated through a simple string.Format("{

Aksi IDE This is a really handy application. It makes it possible for you to develop, edit, and test your code, or even code-in-the-browser quickly. I use it every day. Visual Studio Code (VS Code) Visual Studio Code is a cross-platform editor that provides a set of user interfaces for coding, debugging, and extensibility. JavaScript IDE (Node.js) Ionic Framework and Cordova QuickStart (with Git) There is an Ionic quickstart for Cordova but there is no real quickstart for Ionic framework. There is cordova.sh script that use Ionic CLI and works well. It's a good start point. But there is no real tutorial for beginner. I don't think it's so hard to start with Ionic. In my opinion, the real quickstart for Ionic is using visual studio code, ionic resources and type script on Visual Studio Code. You can install node.js + npm at once, but don't forget to install "npm install -g angular-cli" too. If you don't use "npm install" to install dependencies, you can't type TypeScript. Why I suggest to use visual studio code and Angular CLI? The following are advantages: You can develop everywhere, or develop on the phone Nothing else is needed You can use the same.css,.html,.scss, and.js files, irrespective of where you develop You can develop the same file, and watch it on the browser or on the app You can write apps in many languages You can debug, continuously, your app You can use the same command line for different languages The following are disadvantages: You have to install node.js and npm You need a compiler to be installed You need a type script Have a look on the fast and light "ionic start myApp --type=react --bundle --v2 app" A: The Quick-Start provides an up to date start point. You'll need to install the deps if not already installed. npm install -g cordova npm install -g ionic npm install -g gulp npm install -g bower npm install -g grunt-cli b7e8df5c8

Aksi IDE Free Download!Q: Full text search in datastore (google app engine) I want to create a full text search (gcs) using datastore. in that case which one is the best solution 1) store the data in a document and call it from datastore. or 2) create a datastore entity which will have all the fields to store the data and call the entity from datastore. A: The first approach is to store the data in a database or a file, and retrieve it using the App Engine's blob API. But I don't know much about the GCS API so I can't say which way would be better. I think the key is the number of entities to search for, the first approach is
