feasibility, and practical aspects]. Fine needle aspiration biopsy is a well-established technique for the diagnosis of lung  
parenchymal masses. This procedure is, however, relatively operator-dependent and requires a dedicated suite. This article deals  
with its indications and feasibility in general practice. In the case of classical malignancies, several centers were able to  
demonstrate that this technique had an equal sensitivity in detecting malignancies and that it did not increase the number of false-  
positive cases. However, it was found to be more difficult for small cell lung cancer than for other malignancies. The authors  
also report on good experiences with this technique in the treatment of indeterminate nodules. Order Michigan Supreme Court
