This tutorial is about creating a simple composition for a cover that requires a more realistic lighting approach than standard photoshop might offer. We'll go through a number of concepts and tools to achieve a completely different look. Given the popularity of the term, this tutorial is intended to be more of a "non-photoshop" tutorial than a Photoshop tutorial, but we will be using a lot of Photoshop's features. The same process that we'll create can be applied to any of Photoshop's tools and features, but this tutorial will take you through many of Photoshop's more popular features, such as using a selection and adjustment layer, painting over images, and cropping. We'll use this tutorial with the 1/4" by 3" canvas size. Step 1. Create Your Background To create a more realistic lighting approach for this tutorial, we'll be using a direct lighting technique for the image. First, make a new image at a width of 8 inches by 8 inches to create a canvas that is twice as wide as the final product. Switch to the Color Photo technique and create a new layer. Be sure that the blend mode is set to Linear Dodge. Because Photoshop is a raster editor, you need to prepare the underlying layers first. Add a new layer above the Background layer to create a Gradient Map. Add a soft light blue to the bottom of the gradient. To get the color of the cyan, press CMD/Opt+E and click on the color picker, then type in #00FF00. The Layers panel should resemble the image below: Add a layer mask to the Gradient Map and fill it with the color #00FF00. Now, reduce the opacity of the Gradient Map layer to around 10%. Select the Color Fill layer. Go up to the layer and pull it down. Go to the Tools panel and select Quick Mask, then select the color #00FF00. Pull the mask around the image. Blend the mask so that no portion of the gradient layer appears. This will ensure that the red color fills the entire shadow. Next, we'll make a couple of adjustments to the gradient to create the cyan tint. First, we'll adjust the highlight color using the hue and saturation sliders. Fill a selection over the face and adjust the Color Dodge slider to lighten the highlight color so that the skin

Exercise machines may typically rely on a user to position and/or move various pads and levers to simulate various types of exercise. This type of machine may have difficulty fitting into the tight quarters of an exercise room, and may be difficult to use, particularly for a user who may have limited muscle strength and/or mobility due to a health condition such as arthritis. Other exercise machines may offer resistance to the movement of various joints, including the legs and arms. Such machines may rely on friction type mechanisms, which may provide a level of resistance proportional to the force of friction. Such systems may be disadvantageous in that they may be subject to wear over time, and may not permit a user to achieve a desired degree of resistance.13)-(kW) -----
